30KVA inverter DC input current

Overview

What is the maximum input voltage for a 40kW inverter?

The inverter has a maximum input current, such as 40A for 40kW. Only when the input voltage exceeds 550V, the output is likely to reach 40kW. When the input voltage exceeds 800V, the heat generated by the loss increases sharply, causing the inverter to derate the output.

What is a 30kVA / 360 volt inverter?

The Su-Kam inverter is a 30kVA output capacity digital pure sine wave inverter, capable of powering a sizable set of household or office appliances. It is a 360 volts inverter that requires four units of 5V batteries.

What is the DC current draw for a 3 kW inverter at 24 V?

A 3 kW inverter with 85% efficiency would draw 144 A from the DC battery at 24 V. Also inverter efficiency needs to be considered. eg. if this is 85% at high load a 3 kW AC load would draw 3450 W from the DC battery.

How do I ship my AC output voltage?
