5g communication tower small base station

Overview

What is a 5G cell tower?

A 5G cell tower is basically just a small box, like you see in the image above. While this is how most implementations are turning out, some companies are burying antennas under manhole covers to extend their mobile network through the streets. Despite their size, small cells are not weak.

What is a small cell in a 5G network?

A small cell in a 5G network is the base station that serves a critical role in the overall network. They're called "small cells," as opposed to "macrocells" used in 4G networks, because they're relatively smaller. Since 5G towers can operate on less power, they can be made relatively small.

What is a 5G microcell base station?

5G microcells cover just over a mile. As the name implies, microcell towers are small and can be added to infrastructure, such as lamp posts. An advantage of a microcell base station is its energy efficiency. Small cells are the backbone of 5G and complement macrocells.

Why is a 5G cell tower so small?

Since 5G towers can operate on less power, they can be made relatively small. This is important not only for aesthetics but also for space efficiency—small cells support high frequency millimeter waves, which have limited range (more on why this is important below). A 5G cell tower is basically just a small box, like you see in the image above.

How is a 5G tower different from a 4G tower?

A 5G tower is different from a 4G tower both physically and functionally: more are needed to cover the same amount of space, they're smaller, and they transmit data on an entirely different part of the radio spectrum. Small cells are useful in a 5G network because it's the best way to provide the coverage,

speed, and low latency 5G promises.

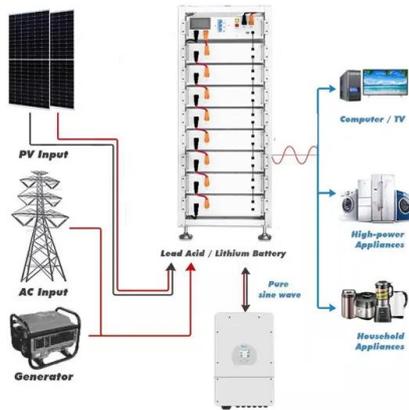

What is 5G & how does it work?

5G is the newest mobile networking technology that's replacing 4G and powering the next generation of internet-connected devices. but how does it work?

You might know that a 5G network uses what's called small cells, but what does that mean?

The cell tower is an essential part of a mobile network.
