Generators of Toronto Power Station in Canada

Overview

Where is the Toronto power generating station located?

The Toronto Power Generating Station National Historic Site of Canada is located on the banks of the Niagara River just above Niagara Falls. The Power House is a rectangular building measuring 132 metres by 30 metres with an imposing classical façade.

Who designed the Toronto Power Generating Station?

Completed in 1906 and designed by Toronto architect Edward James Lennox (who also designed the 'old' Toronto City Hall), the Toronto Power Generating Station held eleven turbines that produced 11,000 horsepower each and later upgrades pushed the output to 137,000 horsepower (Opacity, 2011).

Why is the Toronto Power Generating Station important?

The Toronto Power Generating Station was an important site of the development of technology, engineering and industry in Ontario and the rest of Canada. The building's function and heritage character define its value.

How did the Toronto power generation station change the world?

Its establishment allowed for the supply of hydroelectric power to the burgeoning city of Toronto, revolutionizing its industries and enhancing the quality of life for its residents. With a generating capacity of 137,500 horsepower, the Toronto Power Generation Station became a vital source of electricity.

When was Toronto power station built?

The installation was begun in 1903 with the Power House designed in the formal Beaux-Arts style by architect E.J. Lennox to complement the majestic setting. The Toronto Power Generating Station was opened in 1906, and was purchased by Ontario Hydro in 1922. It operated until 1974.

Who owns Toronto Power Station?

The Electrical Development Company of Ontario initially owned the Toronto Power Generation Station. However, in 1922, Ontario Hydro, the provincial power utility, acquired the station. Under Ontario Hydro's stewardship, the station continued to provide electricity to Toronto and the surrounding areas.
