Does mobile energy storage improve power system resilience?

Compared to stationary batteries and other energy storage systems, their mobility provides operational flexibility to support geo-graphically dispersed loads across an outage area. This paper provides a comprehensive and critical review of academic literature on mobile energy storage for power system resilience enhancement.

What is mobile energy storage?

In addition to microgrid support, mobile energy storage can be used to transport energy from an available energy resource to the outage area if the outage is not widespread. A MESS can move outside the affected area, charge, and then travel back to deliver energy to a microgrid.

What are mobile energy storage resources (MESRS)?

On the one hand, the proliferation of electric mobility has led to mobile energy storage resources (MESRs), including electric vehicles (EVs) and mobile energy storage systems (MESSs), becoming valuable power sources to address load demands during major power outages , .

What are inverter-based energy resources?

ble energy resources—wind, solar photovoltaic, and battery energy storage systems (BESS). These resources electrically connect to the grid through an inverter— power electronic devices that convert DC energy into AC energy—and are referred to as inverter-based resources (IBRs). As the generation mix changes, so do the electrical character.

What is a transportable energy storage system?

Referred to as transportable energy storage systems, MESSs are generally vehicle-mounted container battery systems equipped with standard-ized physical interfaces to allow for plug-and-play operation. Their transportation

could be powered by a diesel engine or the energy from the batteries themselves.

Does power Edison have a mobile energy storage system?

Power Edison has deployed mobile energy storage systems for over five years, offering utility-scale plug-and-play solutions . In 2021, Nomad Trans-portable Power Systems released three commercially available MESS units with energy capacities ranging from 660 kWh to 2 MWh .
