Small wind grid-connected inverter

Overview

The GCI series of Grid Connected inverter or Grid Tied Inverters have been created to handle both wind and PV applications. They are designed to convert the power from wind and PV into utility grade power that can be used by the home or sold to the local electrical utility. With output powers ranging from 2kW to 30kW and a wide input voltage range (30V to 750V), these inverters can handle almost any wind turbine or PV system. With new sophisticated, programmable control and fast responding algorithms, the wind turbine versions out perform any other non dedicated inverters. What is a small type wind grid tie power inverter?

The small type wind grid tie power inverter can obtain the wind energy from wind turbine, and can tie to the grid through its output cables with no extra equipment. The installation is very convenient and reliable. We call the system combining with small grid tie inverter and wind turbine as 'SGWT'.

What is a wind inverter?

A wind inverter converts DC from your generator or turbine into AC (at 230V 50Hz) as required for conventional appliances and for feeding back into the grid.

What are grid-connected inverters?

Grid-connected inverters (GCI) are used to feed power from renewable energy distributed generators into the grid*. They are widely used for this purpose. Repetitive control (RC) enables such inverters to inject high quality fundamental-frequency sinusoidal currents into the grid.

What is a micro wind converter & solar hybrid storage inverter?

Micro Wind Converter and Wind-Solar Hybrid Storage Inverters Micro Converter 1kW/ 2kW This converter combines the wind controller and grid-tied inverter. The wind turbine AC voltage will be connected on the converter directly. A dump load resistance which is also connected on it is used for limiting the RPM of the wind turbine.

Are CTW inverters compatible with Aeolos wind turbines?

CTW-1.5-2ks-3ks-3.6ks-5ks Inverters matched with Aeolos 1kW, 2kW, 3kW and 5kW Wind Turbines. They have been passed the Intertek test according to VDE-AR-N 4105:2011-08 and DIN VDE V 0124-100. There is CE certificates which can be grid tied EU countries. This interface is a product for wind grid tied wind turbines.

What is a grid-connected inverter equivalent model?

Grid-connected inverter equivalent model during normal operation in sequence components. During current limiting, the inverter's fault model is essentially a positive sequence current source with a current of $i \rightarrow L$, sat in parallel with the filter capacitor as shown in Fig. 7 (reproduced from) where if = iL,sat. Fig. 7.
