Sp116 Solar Control System

Overview

Where should sp116 be installed?

SP116 should be installed in return flow of the solar circuit, as indicated above. Please see detailed installation instruction in attached manual. SP226 should be installed in forward flow (manometer side) and return flow (pump side) of the solar circuit, as indicated above. Please see detailed installation instruction in attached manual.

Why is my solar pumping station sp116/sp226 not working?

The solar pumping station SP116/SP226 shows error messages in the main operating menu if there is a problem with temperature sensor. There is broken circuit with sensor connections. Sensor wiring interrupted, not connected or short circuit. Check resistance value, replace sensor if necessary. There is a short circuit with sensor connections.

Where should sp226 be installed?

SP226 should be installed in forward flow (manometer side) and return flow (pump side) of the solar circuit, as indicated above. Please see detailed installation instruction in attached manual. Weekday. 7days of week can be set (e.g. Week 1 means "Monday"). Time. Setting hours and minutes.

How does the solar control program work?

The solar control program works on the principle of temperature difference circulation. Solar pump P1 is triggered, as soon as the preset temperature difference between collector and tank is reached. Press "System Setting" button, until " " displays on the screen.

When is a solar collector pump activated?

The solar collector pump (P1) is activated as soon as the temperature difference between the collector array (T1) and the storage tank (T2) is reached.
