# Tower crane energy storage equipment

#### **Overview**

Do tower cranes need a battery energy storage system?

Tower cranes only require short bursts of high power for lifting. The rest of the time, the diesel generators powering them are often sitting idle or running underloaded. Battery energy storage systems are specially designed to handle surging load behaviours of construction equipment like tower cranes.

Can a Bess power a tower crane?

The BESS can support the generator during periods of high demand, enabling the generator to be downsized to cover the base load efficiently. A battery can be a reliable and more sustainable energy source for powering tower cranes. This setup allows the generator to run more efficiently, reducing fuel consumption and emissions.

How much power does a tower crane need?

Consider a city centre construction site with a tower crane that requires a 250 kVA generator according to the manufacturer's spec sheet. The site operates 24/7 to keep aviation lights and a signboard on, necessitating a continuous power supply all whist adhering to emissions legislation.

Do tower cranes need a diesel generator?

Their significant power demand often means they are too powerful to connect directly to the grid. As a result, contractors typically rely on diesel generators to power them. However, operating tower cranes with large diesel generators can be inefficient, result in high emissions, and lead to substantial fuel costs.

What are the benefits of using a crane & equipment system?

Fast ROI (Return on Investment) – Fuel and maintenance savings typically pay back the system cost within a short period. Scalable for Multiple Cranes & Equipment – The system can be expanded to support other high-power construction machinery.

What is a battery energy storage system?

Battery energy storage systems are specially designed to handle surging load behaviours of construction equipment like tower cranes. BESS acts as a drop in solution to either supplement or completely replace diesel generators on construction sites.
