What is the material of the energy storage cabinet container

Overview

Currently, weathering steel is a widely used structural material for energy storage containers. It has good mechanical strength, welding performance and cost advantages, and is suitable for mass production and complex structure manufacturing. Weathering steel can also form a stable corrosion protection layer on the surface, which improves its corrosion resistance and prolongs its service life. Compared to stainless steel, this type of steel ensures structural strength while significantly reducing material cost and weight, which is a good balance between performance and economy.
